PROFESSIONAL SUMMARY

Software Engineer specializing in backend development and data pipeline architecture with Python. Proven ability to design and implement scalable RESTful APIs, ETL processes, and real-time data systems. Experience with FastAPI, PostgreSQL, Docker, and cloud platforms (GCP). Strong focus on building efficient, production-ready solutions for data-intensive applications.

TECHNICAL SKILLS

Backend Development: Python, FastAPI, Django, RESTful APIs, SQLAlchemy, JWT Authentication, WebSockets, Server-Sent Events (SSE), OAuth 2.0

Databases: PostgreSQL, SQL, Database Design, Query Optimization, ORM Design Patterns

Data Engineering: ETL Pipelines, Data Transformation, Pandas, Data Modeling, Data Warehousing

DevOps & Tools: Docker, Git, GitHub, CI/CD

Cloud & Infrastructure: Google Cloud Platform (GCP), Cloud Storage, Data Warehousing, Remote Deployment

PROJECTS

X Bookmarks Storage API | Backend + Auth System

FastAPI | SQLAlchemy | PostgreSQL | JWT | OAuth 2.0 | X API Dev

- Architected and deployed a full-stack RESTful API with OAuth authentication integration for X (Twitter) platform
- Implemented complete CRUD operations with JWT token-based authentication and role-based access control
- Designed PostgreSQL database schema with SQLAlchemy ORM for optimized bookmark organization and retrieval

IoT CO2 Monitoring System | Backend + ML + Real-time Data

FastAPI | PostgreSQL | MQTT | XGBoost | GCP | SQLAlchemy | aiomqtt

- Engineered backend infrastructure for real-time CO2 monitoring system targeting craft breweries with ML predictions
- Built asynchronous MQTT broker integration using aiomqtt for handling IoT sensor data streams in real-time
- Developed machine learning pipeline with XGBoost for risk prediction based on fermentation CO₂ concentration data

Real Estate Data Pipeline | ETL & Analytics

Python | Pandas | Power BI | Seaborn | Data Warehousing

- Processed and transformed 2M+ records (178MB dataset) from USA Real Estate Dataset using Python and Pandas
- Designed complete ETL pipeline for data extraction, cleaning, transformation, and loading into cloud data warehouse
- Implemented data quality checks and optimization techniques reducing query response time by 40%

- Built analytics dashboards in Power BI with remote warehouse access for real-time market insights

EDUCATION

Bachelor of Science in Software Engineering

University Name | Expected Graduation: 2026 - August

ADDITIONAL INFORMATION

- Open to remote opportunities and relocation
- Fluent Spanish, B2 English
- Seeking Junior Backend Developer, API Engineer, or Backend Engineer positions
